

SIRIUS UNO pre-scraper 2900

Sirius UNO pre-scraper with a polyurethane blade. – A service-friendly and durable pre-scraper for heavy duty.

Sirius UNO pre-scraper 2900 is a larger belt cleaner with a single scraper blade in the Sirius family.

Sirius belt scrapers are all made of durable polyurethane and mounted in a removable cassette. Sirius UNO has a scraper blade instead of segments and like other Sirius pre-scraper segments Sirius UNO's scraper blade is easy to disassemble for replacement and cleaning. The snap function to assemble the scraper blade is unique and it's design is **patented (European Patent 2805901)**.

Sirius UNO's scraper blade can be mounted in existing Sirius 9900/9930 pre-scrappers with some adjustment of the beam's position. The Sirius Uno is stronger than Sirius 9900 to withstand heavier operation and larger drums.

Vendig's unique spring lever ensures that the correct pressure is maintained against the belt which reduces maintenance and prolongs the lifespan of the scraper and the conveyor belt. The pre-scraper shall be positioned against the drive pulley right below the flow of material.

Recommended for \varnothing 320-800 mm pulleys.

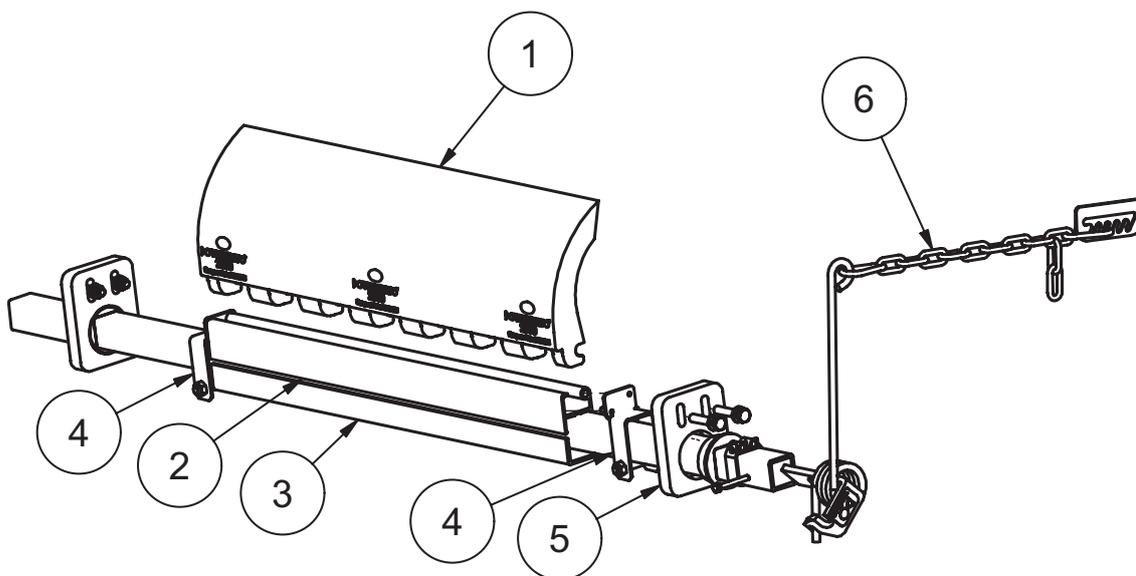

Sirius UNO is the largest in the Sirius family. Here you see the segments for the Sirius 9900-130 and 9900 along with the Sirius UNO scraper blade.

SCRAPER BLADE OPTIONS

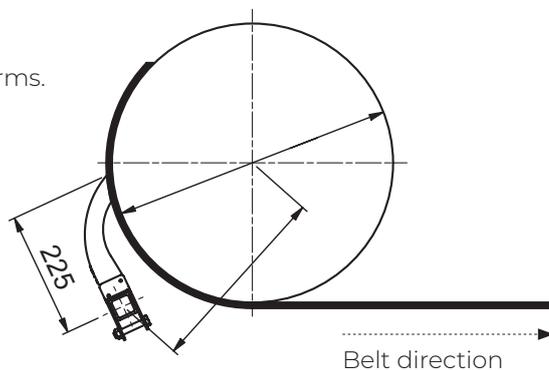

Standard

- 1. Scraper blade, see art. no. below
- 2. Aluminium profile 9982
- 3. Beam
- 4. Brackets LEFT-RIGHT 9980, 9981
